

## Fast Knockdown of Mites

**PORTAL<sup>®</sup>** Miticide/Insecticide provides fast control of damaging mites in peanuts. The active ingredient, fenpyroximate, causes rapid feeding cessation and oviposition within hours after application. **PORTAL** is an excellent rotational option to manage insecticide resistance in spray programs for peanuts.

### Key Benefits

- Contact activity on all developmental stages of mites – larvae, nymphs, and adults as well as existing eggs
- Fast knockdown reduces duration of mite feeding
- Residual activity against immature mites
- Provides added control of leafhoppers
- IPM compatible – soft on beneficial insects

### Use Recommendations

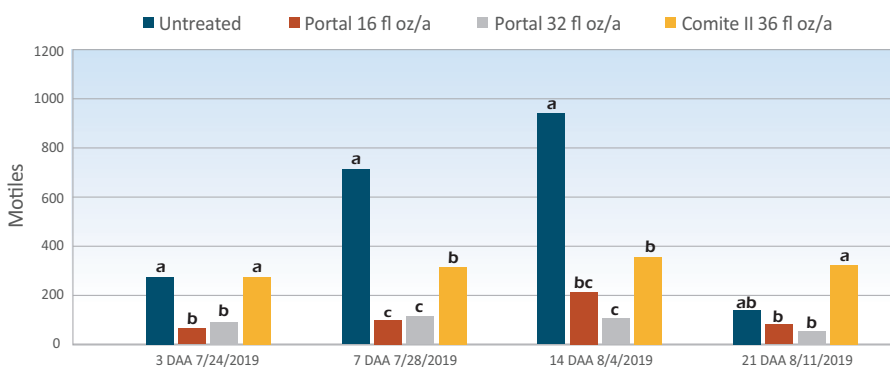

- Use Rate – 1 to 2 pints per acre
- Use a minimum of 3 gallons of water per acre when applying by air and a minimum of 10 gallons of water per acre when applying by ground.

### Use Information

- Portal is a contact miticide. Proper application coverage is critical for maximizing mite/insect control.
- Apply with an adjuvant/spreader to optimize uniformity of coverage and performance.
- Group 21A Insecticide – Rotate with different modes of action.
- Maximum Application – 2 applications per year
- Maximum Rate – 4 pints/A per year
- Reentry Interval – 12 hours
- Preharvest Interval – 1 day

Efficacy of Portal Miticide/Insecticide on Spider Mite Motiles
