Solutions for Weed Control in Rice

The Strada® suite of products contain the active ingredient, Orthosulfamuron, an ALS inhibitor chemistry that provides selective weed control in rice. While Strada contains the single active ingredient, Strada Pro is a premix formulation offering added control of many key broadleaf weeds, sedges, and grasses found in the Midsouth. The unique features of each product allows for customization of rice herbicide weed programs.

STRADA® HERBICIDE

Active Ingredient: Orthosulfamuron

- Excellent control of hemp sesbania, Northern jointvetch, and Indian jointvetch
- No phytotoxicity concerns to rice during postemergence applications
- Late season rescue treatment to prevent many black-seeded broadleaf weeds from heading
- Economical postemergence option for early, late, and rescue timings in Clearfield® and conventional rice programs

STRADA® PRO HERBICIDE

Active Ingredient: Orthosulfamuron + Halosulfuron

- Provides added benefit of yellow nutsedge control
- No phytotoxicity concerns to rice during postemergence applications
- Product of choice when the combination of hemp sesbania, jointvetch, and yellow nutsedge are present in the field
- Economical postemergence option for early, late, and rescue timings in Clearfield and conventional rice programs

	Hemp Sesbania *(coffeebean)*	Northern Jointvetch *(curly indigo)*	Indian Jointvetch	Yellow Nutsedge
